

ABSTRACT OF THE DISCLOSURE

With a simplified construction, it is intended to hang portable audio equipment that outputs audio signals from the user's neck to be used so that the usability is improved.

A plug shell provided with a connecting terminal is fixed to the inside of the plug cover in cylindrical shape through a sleeve formed of an elastic member; and a projecting portion is integrally formed on the connecting terminal side of the plug cover and in projecting portion an engaging groove that engages with an engaging piece provided on the jack side is formed.
